This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1. (previously presented) A fragrance cartridge comprising a reservoir containing a fragrance material and provided with channels to permit ingress of carrier gas into the reservoir and egress of fragrance-containing carrier gas from the reservoir, the channels being defined by capillaries having internal diameter and length dimensions sufficient to act as closure means to substantially prevent leakage of fragrance from the reservoir into a head space external of the cartridge when carrier gas flow is interrupted.
2. (previously presented) The cartridge according to claim 1, wherein the capillaries independently have a diameter of 0.1 to 0.4mm.
3. (previously presented) The cartridge according to claim 1, wherein the capillaries independently have a length of 20 to 30mm.
4. (previously presented) The fragrance containing cartridge according to claim 1, wherein fragrance leakage does not exceed a rate of 400ng per second.
5. (previously presented) A support body having embedded therein a cartridge or cartridges according to claim 1.
6. (previously presented) The support body according to claim 5, comprising a substantially flat body in the shape of a credit card.

7. (previously presented) A support body according to claim 5 having on an outer surface a machine-readable microprocessor chip containing instructions to be read by a device regarding actuation of gas flow through the cartridge or cartridges in a time-dependent and sequential manner, optionally relaying signals from audio or visual apparatus thereby to synchronise the presentation of odours with an audio and/or visual display.

8. (previously presented) A device containing pump means for expelling carrier gas adapted to receive a cartridge, cartridges, or support body containing cartridge or cartridges according to claim 1.

9. (previously presented) A method of enhancing the sensorial perception of a viewer, listener or consumer of an audio and/or visual performance or presentation comprising the step of passing carrier gas through a cartridge, support body or device according to claim 1, thereby to present fragrances into a head space local to the listener, viewer or consumer.
